Agromet Advisory:

- Take up summer ploughing for making best use of unusual rainfall which helps in control of weeds, soil borne pest and disease. Soil testing: This is best time for testing of soil mineral content in crop lands which helps in deciding the required dosage of fertilizers for next sowing season.

Agriculture crops

- Take up deep ploughing for better utilization of summer rain water and conserve the soil moisture in field which helps in control of weeds, soil borne pest and disease. Mango is in fruit development stage, fruit drop can be controlled by spraying of NAA (Naphthalene acetic acid) at 20ppm twice at an interval of 15 days. To control of Powdery Mildew and sucking pest Spray 4 gm Carbaryl + 1g Bavistin per liter of water.

Horticulture crops

- For milch animals regularly follow schedule of 1 kg feed + 50 g mineral mixture per 2 liters of milk yield. Feed animals with a mixture of green grass + hay + minerals + dry feed. Proper ventilation should be maintained for free circulation of air in the sheds.
