# **Forecast Summary**

As forecast received from IMD, cloudy sky with no rainfall may be expected from 08.03.2025 to 12.03.2025 in Mandya district. The day temperature is expected to be 35°C & night temperature is expected to be 17-18°C. The relative humidity in the morning hours is expected to be 72% to 79% & afternoon relative humidity is expected to be in the range of 30-34% Wind speed expected to be 6-10 km/hr.

# **SMS Advisory**

A forecasted temperature for the next five days is 35-36°C. Farmers should irrigate crops adequately and use mulching to conserve soil moisture. Provide shade and sufficient drinking water for livestock to prevent heat stress. Ventilation in polyhouses and shaded structures for horticultural crops will help minimize heat-related damage.

| Recommendations to the farmers:- |              |                 |                  |  |  |  |  |
|----------------------------------|--------------|-----------------|------------------|--|--|--|--|
| Crop                             | Pest/Disease | Damage symptoms | Control measures |  |  |  |  |
| General Advisory                 | γ <b>:</b>   |                 |                  |  |  |  |  |

- No rainfall for the next 5 days will increase soil moisture loss, so irrigation at proper intervals is essential to prevent drought stress.
- **Mulching** with straw, dry leaves, or plastic mulch will help retain soil moisture and reduce evaporation losses.
- **Pest and Disease Monitoring**: Dry conditions favor **thrips, mites, aphids**, and other sucking pests—regularly monitor crops and use biological or recommended chemical controls if necessary.
- **Drip Irrigation or Sprinkler System**: Efficient water management through **drip or sprinkler irrigation** is advised to optimize water usage.
- **For Harvested Crops**: Proper drying and moisture management should be ensured before storage to prevent fungal and insect infestations.

| XX7               | •                 |   |
|-------------------|-------------------|---|
| Weather based adv | asory             |   |
| Crop              | Stage             | Advisory  |
| Paddy             | Nursery to        | Frequent light irrigation is necessary to maintain moisture.    |
|                   | transplanting     | Use alternate wetting and drying irrigation to optimize water   |
|                   |                   | use. Provide shade to nursery beds to reduce heat stress.       |
| Maize             | Vegetative stage  | Apply irrigation at regular intervals to prevent moisture       |
|                   |                   | stress. Mulching with crop residues will help in conserving     |
|                   |                   | soil moisture. Avoid heavy irrigation to prevent waterlogging.  |
| Tomato            | Vegetative stage  | High temperature can lead to flower drop. Apply light           |
|                   |                   | irrigation during early morning or evening hours. Mulching is   |
|                   |                   | recommended to maintain soil moisture.                          |
| Cabbage,          | Harvesting stage  | Harvest crops early in the morning to avoid heat stress. Store  |
| Cauliflower       |                   | harvested produce in a cool and shaded area to maintain         |
|                   |                   | freshness.  |
| Bean, Field Bean  | Harvesting stage  | Complete harvesting before peak temperatures to maintain        |
|                   |                   | quality. Sun-dry harvested produce properly to avoid fungal     |
|                   |                   | infection due to humidity changes.                              |
| Chilli            | Fruit formation   | High temperatures can cause fruit drop. Maintain proper         |
|                   | stage             | irrigation and mulch around plants to reduce soil temperature   |
|                   |                   | and moisture loss. Provide shade nets if required.              |
| Banana            | Fruit development | Frequent light irrigation is needed to prevent fruit shrinkage. |
|                   | stage             | Apply organic mulches to retain soil moisture. Provide          |
|                   |                   | support to prevent plant lodging due to heat stress.            |
| Vegetable crops   | Various stages    | Ensure adequate irrigation. Use mulching to reduce soil         |
|                   |                   | temperature. Monitor crops for pests such as mites and thrips,  |
|                   |                   | which increase under high temperatures.                         |

| Livestock   | , Poultry, and Sericulture Advisory (No Rainfall & High Temperature                   |
|-------------|---|
| Sector      | Weather-Based Advisory  |
| Livestock   | Ensure proper shade and ventilation in animal sheds. Provide ample clean drinking     |
|             | water. Avoid grazing during peak heat hours. Provide mineral supplements to prevent   |
|             | heat stress.  |
| Poultry     | High temperatures may lead to heat stress, affecting egg production and bird health.  |
|             | Maintain proper ventilation in poultry sheds. Provide cool drinking water with        |
|             | electrolytes. Reduce feed quantity in the daytime and provide more during cooler      |
|             | hours.  |
| Sericulture | High temperatures can stress silkworms. Maintain humidity by sprinkling water in      |
|             | rearing rooms. Provide proper aeration and shade to protect mulberry plants from heat |
|             | stress.   |

| Moisture Conservation Practices and Summer Ploughing Advisory |   |  |  |  |  |  |
|---|---|--|--|--|--|--|
| Practice  | Weather-Based Advisory  |  |  |  |  |  |
| Mulching  | Apply dry leaves, paddy straw, or organic waste around plants to reduce           |  |  |  |  |  |
|   | evaporation losses and soil temperature.  |  |  |  |  |  |
| <b>Summer Ploughing</b>                                       | Since rainfall is absent, conduct deep summer ploughing to expose soil-borne      |  |  |  |  |  |
|   | pests and improve aeration. It also helps in better moisture retention for the    |  |  |  |  |  |
|   | next season.  |  |  |  |  |  |
| Irrigation  | Follow drip irrigation or sprinkler irrigation to conserve water. Irrigate during |  |  |  |  |  |
| Management  | early morning or evening hours to minimize evaporation losses.                    |  |  |  |  |  |
| <b>Shading Measures</b>                                       | For young plants and nurseries, use shade nets or temporary structures to         |  |  |  |  |  |
|   | reduce direct heat impact.  |  |  |  |  |  |

# Sugarcane trash management

- **Composting:** Convert trash into organic manure.
- > Mulching: Use as mulch to conserve moisture and suppress weeds.
- ➤ **Bio-decomposer:** Spray bio-decomposers (e.g., *Trichoderma, Pseudomonas*) on trash piles to accelerate decomposition.
- **Soil Incorporation:** Shred and plow trash into the soil.
- **Vermicomposting:** Use in vermiculture for nutrient-rich compost.
- ➤ Animal Bedding: Use for livestock, later as manure.
- > Avoid Burning: Opt for sustainable disposal methods.

## **Recommendation to farmers**

# Crop specific advisory:

| Crop specific adv               | visory:    |  |
|---------------------------------|------------|--|
| Crop                            | Stage      | Advisory   |
| Cabbage<br>diamond back<br>moth | Head stage | <ul> <li>Spray DDVP 76 EC. @0.5 ml./lit water in nursery.</li> <li>15 days before transplanting around the main field and every 25 rows of cabbage one row of mustard sowing, 15 to 20 days after cabbage planting another row of mustard sowing. Mustard as trap crop. Spray on mustard with 0.5 ml. DDVP in a lit. water.</li> <li>During head formation, spray 5 per cent NSKE.</li> <li>Birdpurches may be provided to attract predatory birds.</li> </ul> |
| Chilli                          | Vegetative |  |

| Tomato whiteflies                            | Fruiting stage       | Spray 1.0ml.Oxydemeton methyl 25 EC in a lit. water.  |
|--|----------------------|---|
| Bean Pod borer                               | Pod formation stage  | Spray 2.0 ml. Malathion 50 EC./ lit. water .  |
| Tomato Early<br>and late blight<br>of tomato | Fruiting stage       | For late blight of tomato 15 days prior to transplanting Trichoderma and Pseudomonas enriched compost may be incorporated to the soil. For early blight control spray 2.0 g. Mancozeb 75 WP OR 2.0 g. Maneb OR 2.0 g. Metalaxyl- MZ 72WP. OR 2.0 g. Dimethomorph + polyram/lit. water. For control of late blight spray 2.0 g. Metalaxyl - MZ 72WP. OR 2.0 g. Fosetyl al 80 WP OR 2.0 g. Dimethomorph + polyram in a lit. water, 5 weeks after transplanting. Repeat the spray 7th, 9th and 11th weeks after transplanting. 200- 250 lit. spray solution required/acre/spray. |
| Banana Leaf<br>spot (sigatoka)               | Fruit<br>development | In endemic areas grow resistant banana variety - Sakkare bale.  At the time of planting the rhizomes may treated with any one of the Fungicides /lit. water a)Propiconozole 25 EC 1.0 ml. b)Theiophenate methyl 70 Wdiv 1.0 g. c)Carbendazim 50 Wdiv 1.0 g. d)Metham Sodium (Vapom) - 1.0 g. In Mashy area provide drainage.  |
| Field bean pod<br>borer                      | Pod<br>development   | Dust 10 kg. Fenvalrate 0.4 D. OR Malathion 5 D. per acre during morning hours.  |
